Refer to the given passage and answer the questions from 9-12 .

Pollution is a problem that has become more and more pressing over the last few decades. There are different kinds of pollution, which are air pollution, noise pollution, water pollution, and soil pollution, all of which are incredibly harmful to the environment. These refer to contamination of the air by fumes or unwanted noise, contamination of water bodies and that of land, respectively. It is needless to say that these are rigid examples of pollution due to

urbanisation. Urbanisation refers to the concept of rural towns and villages developing into urbanised towns and cities.
Urbanisation has demerits more than merits. Pollution has been a long-standing problem in our world for a few decades now. Pollution refers to when there are contaminants that pose harm to the environment, and there are four main types of it. Soil or land pollution refers to the wastage we leave on the land, and also toxic substances that seep into the soil and ruin its fertility. Noise pollution refers to unwanted and unpleasant noises; all the types of pollution are incredibly detrimental to the planet. The bad part about urbanisation is that the factories which create a lot of pollutants. They release smoke into the air, harmful waste into water streams and surrounding land, and also make a lot of noise because of their machines.
Thus, there is a lot of pollution due to urbanisation, and it is very harmful to the environment when urbanisation starts. While pollution on its own is a pressing problem for our world, pollution due to urbanisation is a huge problem. Adding to that, it is becoming a bigger and bigger problem as urbanisation is taking over even the smallest areas. Yes, development is something to applaud, but not when it goes to the extent of causing harm to or destroying the environment.
